Benefits of receiving the COVID-19 vaccine

COVID-19 can cause severe medical complications and lead to death in some people. There is no way to know how COVID-19 will affect you. If you get COVID-19, you could spread the disease to family, friends and others around you.

Getting a COVID-19 vaccine can help protect you by creating an antibody response in your body without having to become sick with COVID-19. A COVID-19 vaccine might prevent you from getting the virus. Or, if you get COVID-19, the vaccine might keep you from becoming seriously ill or from developing serious complications.

Getting vaccinated also might help protect people around you from COVID-19, particularly people at increased risk of severe illness from this virus.

What to expect:

- You must schedule your COVID vaccine, walk-ins will not be accepted.
- Wear loose fitting clothing with easy arm access.
- Plan on staying at the clinic for 15 to 30 minutes after vaccination to be monitored for reactions.
- If you are receiving the first dose in a two-dose series you will need to schedule your second dose appointment before leaving the clinic.

More information about the COVID-19 vaccine can be found at riversidehealthcare.org/vaccine
